

Aayush Arora

Founder, Suraksha

Founder and solo builder of Sakshi, an AI personal safety platform that detects threatening behaviour patterns from camera and mic sensors and escalates to SOS only after verification. Unity and C# developer with 14 months of professional experience at Sunbase, where I built a QA automation framework, an OpenCV document scanner and an AR measurement tool.

EDUCATION

Bachelor's program in AI & Business
Scaler School Of Technology
08/2026 - 2030 (Expected)

B.Sc. (Hons.) Computer Science (online)
BITS Pilani
08/2026 - 2030 (Expected)

SKILLS

- **AI & Computer Vision:** OpenCV, YOLO, MediaPipe, pose estimation, real-time computer vision
- **Backend:** Python, FastAPI, WebSockets, REST APIs, Supabase, authentication
- **Unity and Games:** Unity, C#, Photon PUN2, real-time multiplayer, AR
- **Cloud and Tools:** AWS, Docker, Git, GitHub, CI/CD
- **Testing:** automated testing, QA automation frameworks

PROJECTS

- **Papa Aa Gaye:** Developed a 60-second hostel-cleanup comedy game, generating **5K+ installs and 4M+ views** through organic marketing. Play now.
- **Speedracers:** Built a 2D typing-based racing game in **Unity and C#**, featuring Photon PUN2 multiplayer, competitive modes, and progression systems. Play now.

PROFESSIONAL EXPERIENCE

Founder & Lead Developer | Suraksha

August 2026 – Present

SAKSHI AI-Assisted Personal Safety Platform

- Built a **7-layer AI safety pipeline** integrating person detection, ByteTrack tracking, pose estimation, threat scoring, Gemini-based verification, SOS handling, and incident logging.
- Developed a real-time computer vision prototype achieving an observed **20–30 FPS** on a laptop, combining YOLO-based detection and pose estimation.

Unity Developer | *Sunbase* (Remote, US-Based)

June 2025 – August 2026

- Transitioned rapidly from Intern to full-time Unity Developer based on production performance.
- Engineered a custom QA automation framework covering **150+ test cases**, reducing test execution time from several hours to **15–30 minutes per run** and improving test coverage by **90%** using a specialized CLI test runner.
- Developed an OpenCV-based document-scanning pipeline featuring boundary detection, perspective correction, image enhancement, and multi-page scanning, with **sub-1-second processing** and improved scan readability.
- Developed a cross-platform AR measurement tool for **Android and iOS**, integrating multiple measurement modes and real-time spatial mapping, achieving **1–3 cm measurement error** and **60 FPS** during testing.
